What is claimed is:

- 1. A method of imaging an artery of a patient using
- 2 magnetic resonance imaging, comprising,
- 3 detecting an elevated concentration of magnetic resonance
- 4 contrast agent in the artery; and
- 5 imaging at least a portion of the artery including
- 6 collecting image data which is representative of the center of
- 7 k-space after detecting the elevated concentration of magnetic
- 8 resonance contrast agent in the artery.
- 1 2. The method of claim 1 wherein the step of imaging at
- 2 least a portion of the artery further includes collecting image
- data which is representative of the center of k-space when a
- 4 concentration of the contrast agent in the artery is
- 5 substantially higher than a concentration of the contrast agent
- 6 in veins adjacent to the artery.
- 1 3. The method of claim 1 wherein the step of imaging at
- 2 least a portion of the artery includes collecting image data
- 3 which is representative of the center of k-space when the
- 4 concentration of the contrast agent in the artery is greater
- 5 than a predetermined concentration.

- 1 4. The method of claim 1 wherein the step of imaging at
 2 least a portion of the artery includes collecting image data
 3 which is representative of the center of k-space substantially
 4 at the beginning of an imaging sequence.
- The method of claim 4 wherein the imaging sequence is
 a 3D imaging sequence.
- 1 6. The method of claim 1 wherein the step of detecting an 2 elevated concentration of magnetic resonance contrast agent in 3 the artery further includes measuring a base line signal which 4 is representative of a response of the artery to at least one 5 magnetic resonance radio frequency pulse prior to administering 6 the magnetic resonance contrast agent to the patient.
- 7. The method of claim 6 wherein the step of detecting an elevated concentration of magnetic resonance contrast agent in the artery includes the step of monitoring the artery after administering the contrast agent to the patient to detect the arrival of the contrast agent in the artery.

- 8. The method of claim 7 wherein the step of detecting an elevated concentration of contrast in the artery further includes the step of detecting a change in the response of the artery to at least one magnetic resonance radio frequency pulse.
- 9. The method of claim 8 wherein the change in the response of the artery to at least one radio frequency pulse includes a change in a maximum amplitude of a responsive RF signal or a change in the shape of a responsive RF signal.
- 1 10. The method of claim 7 wherein the step of imaging at
 2 least a portion of the artery of interest includes collecting
 3 image data which is representative of the center of k-space
 4 substantially at the beginning of an imaging sequence and while
 5 the concentration of the contrast agent in the artery is
 6 substantially elevated.
- 1 ll. The method of claim 10 wherein the imaging sequence is 2 a gradient echo imaging sequence.
- 1 12. The method of claim 10 wherein the imaging sequence is 2 a 3D gradient echo imaging sequence.

- 1 13. A method of imaging an artery in a region of interest
- of a patient using magnetic resonance imaging, comprising,
- 3 detecting a predetermined concentration of magnetic
- 4 resonance contrast agent in the artery; and
- 5 imaging at least a portion of the artery including
- 6 collecting image data which is representative of the center of
- 7 k-space after detecting the predetermined concentration of the
- 8 contrast agent in the artery and while the concentration in the
- 9 artery is higher than a concentration of the contrast agent in
- veins adjacent to the artery.
- 1 14. The method of claim 13 wherein the step of detecting
- 2 a predetermined concentration of magnetic resonance contrast
- agent in the artery detects the arrival of the contrast in the
- 4 artery.
- 1 15. The method of claim 14 wherein the step of imaging at
- 2 least a portion of the artery of interest includes collecting
- 3 image data which is representative of the center of k-space
- 4 substantially at the beginning of a 3D imaging sequence.

least a portion of the artery further includes collecting image data which is representative of the center of k-space while the concentration in the artery is substantially higher than a concentration of the contrast agent in veins adjacent to the artery.

- The method of claim 16 wherein the step of detecting 17. magnetic resonance contrast agent in the artery includes detecting a substantially elevated concentration of magnetic resonance contrast agent in the artery and the step of imaging at least a portion of the artery includes collecting image data which is representative of the center of k-space after detecting the substantially elevated concentration of magnetic resonance contrast agent in the artery.
 - administering the magnetic resonance contrast agent to the patient in a bolus type injection and wherein the step of imaging at least a portion of the artery of interest includes collecting image data which is representative of the center of k-space substantially at the beginning of a 3D imaging sequence.

- 1 19. An apparatus for imaging an artery in a region of
- 2 interest of a patient using magnetic resonance imaging,
- 3 comprising,
- detecting means for detecting a predetermined concentration
- of magnetic resonance contrast agent in the artery and, in
- 6 response thereto, for generating an imaging initiation signal;
- 7 and
- 8 imaging means, coupled to the detecting means, for
- 9 collecting image data which is representative of the center of
- 10 k-space in response to the imaging initiation signal.
 - 1 20. The apparatus of claim 19 wherein the imaging means
 - 2 collects the image data which is representative of the center of
 - k-space substantially at the beginning of a 3D imaging sequence.
 - 1 21. The apparatus of claim 19 wherein the detecting means
 - 2 generates the imaging initiation signal when the concentration
 - of the contrast agent in the artery is substantially elevated.
 - 1 22. An apparatus for imaging an artery of a patient using
 - 2 magnetic resonance imaging and a magnetic resonance imaging
 - 3 contrast agent, comprising,

- detecting means for generating an imaging initiation signal
- 5 in response to detecting the magnetic resonance imaging contrast
- 6 agent in the artery; and
- 7 imaging means, coupled to the detecting means, for
- 8 collecting image data which is representative of the center of
- 9 k-space in response to the imaging initiation signal.
- 1 23. The apparatus of claim 22 wherein the imaging means
- 2 collects the image data which is representative of the center of
- 3 k-space substantially at the beginning of a 3D imaging sequence.
- 1 24. The apparatus of claim 22 wherein the imaging means
- 2 collects image data which is representative of a periphery of k-
- space after collecting image data which is representative of the
- 4 center of k-space.
